Object : HSE Performances

The prevention of accidents is directed at three broad aspects:

1. The creation of a safe place of work
2. The development and operation of safe working practices
3. Ensuring the personal safety of all employees

In this way the general principles of prevention need to be applied in a systematic and cohesive manner.

The management and staff of the ENI Congo DIPO are pleased to confirm that the milestone mark of Two Million Man Hours has been completed without an LTI occurrence by JV Renco-Sicim.

JV Renco-Sicim have always undertaken in preventing and protecting people's health and safety, with a view to guaranteeing continuity, maintenance and improvement of performance and a company organization model that reinforces conformity with the law requirements on these matters.

We would like to thank everybody involved with the projects, both past and present who were committed to ensuring and achieving a safe working environment. We cannot rest on our laurels and the same effort and commitment will be able to lead us on to continue & improve.

There is no good performance without good HSE performance.

Best Regards ,

Francesco Amoretto
