DOCUMENT TITLE			Energy Policy			

POLICY

Energy Management Policy

At SICIM we design and create for our Customers turnkey solutions related to the production, treatment and transport of traditional energy sources and renewable carriers, supporting the energy transition.

With the same spirit, the Company is therefore committed to continuously improving its energy efficiency, reducing energy consumption and minimizing the environmental impact of its activities at the Busseto headquarters, in compliance with the UNI CEI EN ISO 50001:2018 standard.

SICIM intends to achieve this goal by setting energy objectives that provide sustainable industrial solutions and models for the new generations, committing itself to:

- Improve energy efficiency through the adoption of innovative technologies and the optimization of business processes;
- Monitor and measure energy consumption, identifying areas for improvement and implementing effective solutions;
- Ensure legislative compliance with all current regulations on energy and sustainability;
- Promote energy awareness among employees and stakeholders, through training and awareness;
- Integrate energy management into corporate strategies to ensure a systematic and sustainable approach;
- Promote the use of renewable energy sources and the reduction of greenhouse gas emissions.

The company therefore aims to:

- Progressively reduce energy consumption per unit of product/service;
- Investing in more energy efficient technologies and processes;
- Implement increasingly advanced energy monitoring and management systems;
- Involve suppliers and partners in promoting sustainable practices.

With the aim of achieving these objectives, the Top Management of SICIM supports and guarantees the application of the Energy management system at the Busseto headquarters and undertakes to make available the necessary resources for the implementation of this policy, ensuring the active involvement of all staff and providing the necessary technical-economic support.

The Energy Management System will be periodically reviewed and updated to ensure continuous improvement of the company's energy performance.

The energy policy is communicated to all staff, suppliers and stakeholders and is made available to the public to promote transparency and shared commitment towards a more sustainable energy future.

Busseto, 01/01/2025

President
Attilio Cagnani
